

PORTIR

poslovni regulator | troškova električne energije i radnog vremena

A unique cloud application for recording of the presence of employees and saving electricity.

The Turnkey system allows you to use application and hardware immediately "from the box".

There is no need for an assembly implementation and additional expenses.

With the help of applications and other smart devices, you can have significant electricity savings at the company level.

After the last check-out the employee Portir automatically turns off the electricity and lights.

When registering the first employee, Portir automatically turns on the electricity.

Portir app can work with smart devices for additional control in your office.

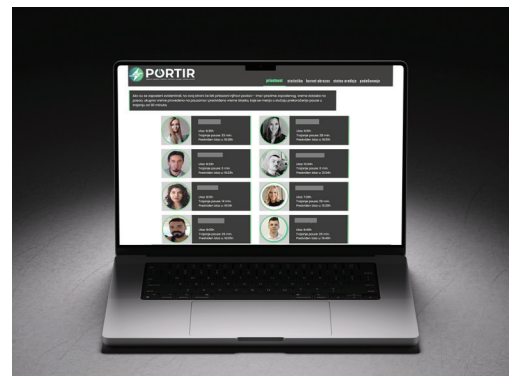

Details about the presence of your employees are always available and confidential, you create and manage them.

At the end of the month, Portir generates carnet of working hours of employees with lac data export to Microsoft Excel.

How the Portir App actually functions?

Portir application has simple licensing options

45€
MONTHLY RENT
4,5€ / USER

- # Access to the Portir App
- # 10 users (tags)
- # 1 tag reader
- # 1 smart socket (SONOFF)

**15%
DISCOUNT**

459€
ANNUAL RENT
38,25€ / USER

The monthly rental price of the web application for an additional user is 4.5 EUR.
The price of a one-year rental of the web application for an additional user is EUR 45.90

Additional prices:

Additional tag reader: 80 EUR

PORTIR

From the experience gained in working with IoT technologies, we developed the application PORTIR (Business Regulator of Electricity Costs energy and working time).

Portir is primarily a web application for recording employees' attendance and working hours. Each employee has a Tag-key. By bringing the Tag to the reading device, the system registers the employee, the time of his entry, and calculates when his working day ends, in the case of flexible working hours.

All that information and a list of present employees is displayed on the application's home page. In the calendar, different colors mark the days when the employee was absent, worked less, or stayed overtime.

An overview of the attendance by month can be seen for each employee, and a carnet form with data is automatically generated for each month. Selecting a date in the calendar displays the list of entries and exits for that day and the total hourly rate.

PORTIR is specific because it is currently the only application of this type that also deals with saving electricity. The PORTIR app can be connected to smart switches and sockets. It is possible to monitor the status of the device in real time.

At the end of the day, when the last employee signs by applying the tag to the reader, the PORTIR app turns off all the lights and sockets. In this way, unnecessary consumption of electricity is avoided. It can't happen that lights stay on or the air conditioners are left to run unnecessarily after working time or on weekends.
